

Colorectal Surgery

Some of the Most Advanced, Laparoscopic Technology and Care in Colorectal Surgery

Our colorectal surgeons at NewYork-Presbyterian Queens, in collaboration with Weill Cornell Medicine, are recognized for their extensive experience in minimally invasive surgery and state-of-the-art laparoscopic technologies for colorectal cancer, Crohn's disease, and ulcerative colitis.

Our program offers state-of-the-art care in the detection, diagnosis, and treatment of disorders affecting the colon, rectum, and anus including:

- Colon cancer
- Rectal cancer
- Colorectal adenoma
- Crohn's disease
- Ulcerative colitis
- Diverticulitis
- Anal and rectal disease (hemorrhoids, polyps, fissures, and abscesses)

Minimally invasive surgery has a range of benefits, including decreased post-operative pain, shorter post-operative recovery time, and less noticeable scarring. Our surgeons perform the following procedures:

- Laparoscopic colon resection
- Robotic surgery for rectal cancer and treatment of other colorectal disorders
- J-pouch procedure for inflammatory bowel disease
- TransAnal Minimally Invasive Surgery (TAMIS) for the removal of rectal polyps not amenable to colonoscopic removal

For more information, or to schedule an appointment, contact the Department of Surgery at 718-445-0220.
